*Collective thought. Unified Goals. Sustained Action.*

Our Metroplex is growing and thriving, however the shaping forces of a pandemic, evolving technology, leadership transitions, politics, demographic changes, legislative direction, economic and environmental changes impact the potency of prior planning and compel our attention to identify the refinements and next regional imperatives to be addressed.

Regional challenges require solutions brought from collective thought, unified goals and sustained action. These sessions will be the beginning of an ongoing structure to execute the plans needed to enrich and empower our region to thrive for generations.
